(54) CATAPLASM

(57)Abstract:

PURPOSE: To provide a cataplasm made up of a substrate and a hydrous ointment, improved in both effectiveness and tackiness as well as application feeling, using such a substrate with a specified moisture permeability as to consist of a sheet form with polymer films and porous sheets integrated.

CONSTITUTION: The objective cataplasm made up of (A) a substrate 11 and (B) a hydrous ointment 21. The substrate consists of a sheet form produced by integrally laminating polymer films 13, 13' and porous sheets 15, 17 made of e.g. nonwoven fabric, woven fabric, knitted fabric, being 100-4000 (pref. 1000-3000)kg/m²/24hr in moisture permeability determined in accordance with the JIS general test method [moisture permeability test method for moisture-proof packaging materials (cut test)] condition A. The present cataplasm is improved

in skin irritability and the oiliness after debonding and enhanced in ointment tackiness and the migration of active ingredients to the skin with the transpiration of the water contained suppressed.
